UNIT LOAD CAPACITY INFORMATION - 1.65 SAFETY FACTOR

Before selecting type of post, consideration should be given to loads to be carried. Use the formula below to get unit load, then select post type from table.

$$(B-2) \times A = \text{Unit Load}$$

A=Shelf Load (See note 2)
 B=Shelves per unit (includes top and bottom shelves)

- WARNING:**
 Use H-Posts for:
- High-rise applications
 - Pass-through applications regardless of load
 - High-density, multi-level applications

TYPICAL SWAY BRACE INSTALLATIONS FOR SEISMIC ZONE NO. 0 & 1

Standard Shelving (Beaded Front Posts)
 High-Density Shelving (H-Posts)

Use of Side Sway Braces (Part No. 5344 – Standard Shelving) (Part No. 5341–High-Density Shelving)

Use of Back Sway Braces (Part No. 5342) for both standard and high density shelving

NOTES: 1-When splicing posts for increased heights or for multi-level shelving, use the proper number of braces required for the height of the posts being added. **Example: a 10'-3" model increased another 10'-3" in height would require 4 sets of side sway braces and 4 sets of back braces.**
 2-For additional bracing requirements in Seismic Zones No. 2, 3 and 4, consult the Hallowell Applications Engineering Department.
